Risk Warning

Trading Forex and CFDs (Contract For Difference) is risky.

Before installing the GBE brokers MT4 Booster Pack, we recommend that you read through all the user guides, and also watch the videos that we've created for you (see the MT4 Booster Pack Welcome Email for more details).

If you've got any questions, feel free to get in touch with the GBE brokers Customer Care Team. Our support team can provide you with info on how to setup the tool, but they can't provide financial advice, even if you're super nice 😊.

Thanks,
The GBE brokers Team

1. Overview

The Chart-in-Chart indicator shows the price action for an additional symbol in a sub-window on the main chart, allowing bar-by-bar comparisons of price action on the main chart symbol against the subsidiary symbol.

You can add multiple copies of the indicator to a chart in order to show multiple extra symbols. In the following example the main EURUSD chart has sub-windows showing GBPUSD, AUDUSD, and JPYUSD:

You can choose to [invert prices](#), e.g. so that USDJPY is shown as JPYUSD (as in the above example).

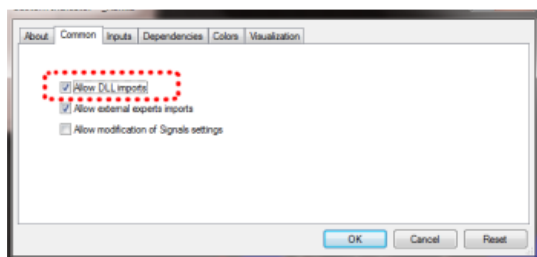

Although the sub-window cannot provide the full functionality of a main MT4 chart, you can [add popular technical indicators](#) such as moving averages and envelopes to the display, and you can choose to display the levels of open positions and pending orders.

2. Using the Chart-in-Chart Indicator

2.1 Adding the Indicator to a Chart

You add the Chart-in-Chart indicator to a chart in the usual MT4 way, either by dragging it from the Navigator onto a chart, or by double-clicking on it in the Navigator. You can also use standard MT4 features such as adding the indicator to your list of Favorites, or assigning a Hotkey to it.

You need to turn on the “Allow DLL imports” setting in the “Common” tab of the indicator’s options:

2.2 Choosing the Symbol

You set the symbol to display using the Symbol parameter in the Inputs tab.

The symbol must be present in the MT4 market watch, and you should include any suffix which your account has for symbol names, e.g. EURUSD+

To display more than one symbol, you simply add multiple copies of the indicator to the chart.

2.3 Inverting Prices

You can invert prices by turning on the option on the Inputs tab. For example, this will convert USDJPY into JPYUSD.

2.4 Drawing Style and Colours

You can use the Inputs tab to choose between different drawing styles:

- Price candles
- Line showing close price only
- Lines showing high and low prices

MT4 Booster Pack · Chart-in-Chart · User Guide

You can set the colour of the candle “wick”, or of the close or high and low lines, using the first of the colour parameters. For candles, you can also set different colours for up (“bull”) and down (“bear”) bars.

Hovering the mouse over a candle, or over the close or high and low lines, displays a pop-up tooltip giving the price values at that point in time.

2.5 Current Price

By default, the indicator will draw a horizontal line showing the current (bid) price. You can change the colour of this line using the setting on the Inputs tab. Changing the colour to “none” turns off the line.

2.6 Trade Levels

You can turn on the display of trade levels:

- Entry price for open positions
- s/l and t/p of open positions
- Entry price for pending orders

Each of these settings has a different colour parameter on the Inputs tab. Choosing a colour other than “None” turns on the display of this information. Hovering the mouse over one of these lines will then show information about the open position or pending order.

(If you [invert prices](#), then the display of trade levels is also inverted. For example, a USDJPY buy will be shown as a JPYUSD sell, and a buy-limit will be shown as a sell-stop.)

2.7 Technical Indicators

The sub-window cannot provide the full functionality of a main MT4 chart – for example, you cannot drop an indicator from the Navigator onto the sub-window in order to add it to the price display for the extra symbol – but you can choose to include some popular technical indicators in the price display.

The Inputs tab contains 5 blocks of settings which you can use to define technical indicators. Each of these has a choice of indicator, a colour, a line-style, and parameters for the indicator.

MT4 Booster Pack · Chart-in-Chart · User Guide

The indicators which are available are as follows:

- SMA (simple moving average)
- EMA (exponential moving average)
- SMMA (smoothed moving average)
- LWMA (linear-weighted moving average)
- Bollinger band
- Envelope based on SMA
- Envelope based on EMA
- Parabolic SAR
- Yesterday's daily (D1) close price
- Yesterday's daily (D1) high and low prices
- Fixed price (equivalent to drawing a manual horizontal line on the chart)

The meaning of the "parameter 1" and "parameter 2" settings depends on the type of indicator:

Technical indicator	Parameter 1	Parameter 2
SMA	Period for moving average	(not used)
EMA	Period for moving average	(not used)
SMMA	Period for moving average	(not used)
LWMA	Period for moving average	(not used)
Bollinger bands	Period for moving average	Number of deviations
Envelope (SMA or EMA)	Period for moving average	Deviation %
Parabolic SAR	Step value	Maximum value
D1 close	(not used)	(not used)
D1 high and low	(not used)	(not used)
Fixed price	Level for price line	(not used)
